DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, 32-43, and 38, drawn to a method facilitating similarity recognition of a digital signal that results in a recognition value that indicates the perceptual aspects of the signal, classified in class 382, subclass 181.
 - II. Claims 7-31, 35-37, and 39, drawn to methods for hashing a digital signal, classified in class 382, subclass 232.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I claims facilitating the recognition of a signal by deriving a recognition value based on perceptual attributes, whereas invention II claims the steps for hashing a signal. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
